Low-Fi Shopping Cart Page

The image shows a hand-drawn low-fi shopping cart page for a bakery named "Bun Bun Bake Shop". The page is designed to look like a spiral-bound notebook. At the top, there's a header with the shop's name and navigation links: "HOME", "SHOP", "LOCATIONS", and "DELIVERY" with a shopping cart icon. Below the header, there's a back arrow and the text "Shopping cart". The main content area is a table with two columns: "ITEM" and "TOTAL". It lists two items: "Original Cinnamon Roll" and "Walnut Cinnamon Roll". Each item entry includes a small square icon with a drawing of the roll, the item name, its price (\$1.99), quantity, glazing options, and a "Remove" link. At the bottom, there's a summary section with "Total:", "Shipping estimate:", and "Order Total:" followed by their respective amounts. A "PROCEED TO CHECKOUT" button is located at the very bottom.

© Bun Bun Bake Shop HOME SHOP LOCATIONS DELIVERY

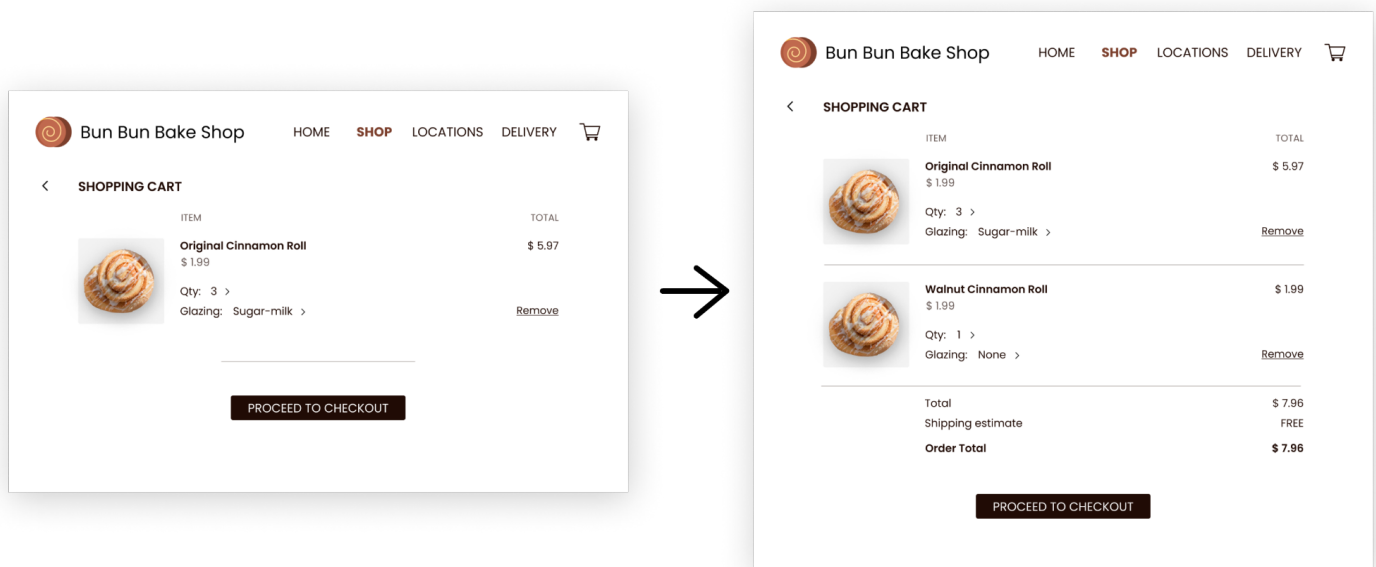

< Shopping cart

ITEM	TOTAL
 Original Cinnamon Roll \$ 1.99 Qty: 3 > Glazing: Sugar-Milk >	\$ 5.97 <u>Remove</u>
 Walnut Cinnamon Roll \$ 1.99 Qty: 1 > Glazing: None >	\$ 1.99 <u>Remove</u>
Total:	\$ 7.96
Shipping estimate:	FREE
Order Total:	\$ 7.96

PROCEED TO CHECKOUT

The shopping cart page should explicitly show the order summary and price. Therefore, for each item that is added to the cart, I include 1) the product image at the first column, 2) product name, unit price, quantity, and glazing option at the second column, 3) total price and remove option at the third column. Users are given the freedom to change the quantity and glazing at this stage, indicated by the arrows next to the two options. At the bottom are the total cost, shipping estimate, and order total cost, followed by the “process to checkout” button.

High-Fi Shopping Cart Page

The image on the left is from the previous assignment. On the right image, I added the order cost summary at the bottom (total cost, shipping estimate, and order total cost). My rationale for this addition is that it is more intuitive for customers to see both their order details and total cost on the same page. By having the shipping estimate and order total cost, customers can know instantly how much they pay instead

of on the next page where they choose their payment method. I also made the divider line longer because as I added another item on the right image, I realized the short line cannot aesthetically and functionally divide the space.
